

## How to install, uninstall, activate, and deactivate EED silently

April 21, 2017

It is now possible to silently install, uninstall, activate, and deactivate EED using a command line command in a batch-file. The feature for activation/deactivation was added in EED v4.18 update dated April 21, 2017.

### Installation

Make a command file (e.g. "EED\_install.cmd") with this text and run to install:

```
EED_Setup.exe /VERYSILENT /SUPPRESSMSGBOXES
```

After installation, activation is necessary, see below.

See Appendix A for more options.

### Uninstallation

Upon installation, the uninstall file "unins000.exe" will be created in folder

```
"C:\Program Files (x86)\BLOCON\EED_vX.XX"
```

Make a command file (e.g. "EED\_Uninstall.cmd") with this text:

```
unins000 /VERYSILENT /SUPPRESSMSGBOXES
```

Copy to folder above and run to uninstall EED. Note that EED also will be automatically deactivated upon uninstallation, so deactivation before uninstallation (when using "unins000.exe") is not necessary.

### Activation

Place a command file (e.g. "EED\_activate.cmd") in folder "C:\Program Files (x86)\BLOCON\EED\_v4.18" (or where EED\_v4\_18.exe is located) with this text:

```
EED_v4_18 activate yourproductkey
```

A file "ActivationLog.txt" will be created (or appended if it already exists) in folder  
"C:\Users\username\Documents\Blocon\EED 4"

A correct activation will be shown in this file as

```
EED v4.18 2017-04-21 at 11:53:47. ACTIVATE. Result: Activated
```

Tips: delete the command file afterwards in order not to expose your product key.

### Deactivation

Place a command file (e.g. "EED\_deactivate.cmd") in folder "C:\Program Files (x86)\BLOCON\EED\_v4.18" (or where EED\_v4\_18.exe is located) with this text:

```
EED_v4_18 deactivate yourproductkey
```

A file "ActivationLog.txt" will be created (or appended if it already exists) in folder  
"C:\Users\username\Documents\Blocon\EED 4"

A correct deactivation will be shown in this file as

```
EED v4.18 2017-04-21 at 11:58:18. DEACTIVATE. Result: Deactivated
```

Tips: delete the command file afterwards in order not to expose your product key.

## Appendix A

The Inno Setup install parameters that are required for silent installation:

/SILENT	Runs the installer in silent mode (The progress window is displayed)
/VERYSILENT	Very silent mode. No windows are displayed.
/SUPPRESSMSGBOXES	Suppress message boxes. Only has an effect when combined with '/SILENT' and '/VERYSILENT'.
/NOCANCEL	Disables cancelling the installation process.
/NORESTART	Prevents installer from restarting the system even if it's necessary.
/DIR=" <i>x:\dirname</i> "	Overrides the default install directory.

### Example

Silently install the program, prevent restarting the system.

```
setup.exe /VERYSILENT /SUPPRESSMSGBOXES /NORESTART
```
